 WallDefender™

WALLDEFENDER™ HELPS KEEP CAVITY WALLS DRY AND FLASHINGS FUNCTIONING PROPERLY

Mortar dropping device that helps prevent mortar droppings from blocking the weeps.

Features

- Dual levels
- Trapezoidal shape
- 90% open weave mesh
- Up to 54% recycled content

Benefits

- An alternative to MortarNet® without an Insect Barrier
- Breaks up and suspends mortar droppings above the flashing on two levels so weeps stay open
- Open weave mesh construction provides hundreds of pathways for moisture to exit the cavity
- Is very permeable to air, water and water vapor due to the low fiber density of the non-woven structure
- Helps prevent efflorescence, damage from freeze-thaw cycles and mold growth
- Easy to transport, handle and cut, even on scaffolding
- Installs easily on brick ties in multi-story cavity walls
- Will not degrade, oxidize, or react with common building materials
- Clean and non-toxic
- Recycled content helps with LEED certification
- Helps eliminate callbacks to repair moisture damage
- Provides masons and building owners with a greater peace of mind

Weep holes must be used with WallDefender to allow effective moisture drainage and wall drying. Visit WeepVent™ or CellVent™ on mortarnet.com to see how they can help keep weep holes open and prevent insects from entering the cavity through the weeps.
