Section 11: Toxicological Information

This information below may not be consistent with the material classification in Section 2. In addition, toxicological data on ingredients may not be reflected in the material classification and/or the signs and symptoms of exposure, because an ingredient may be present below the threshold for labeling, or the data may not be relevant to the material as a whole.

Finely divided Quartz has caused cancer and lung disease in workers that inhale it over an extended period of time. Additionally, there have been studies performed in animals that suggest Carbon Black and Titanium Dioxide may cause lung cancer through inhalation. Studies suggest, however, that these hazards are not associated with other routes of exposure. Since this product is in a liquid/paste form, none of these components are able to become airborne and cannot be inhaled. Thus, the hazards usually associated with Quartz, Carbon Black, or Titanium Dioxide are not applicable to this product.
